- Sorts by denomination
- The highest accuracy of banknote verification
 - IR – Infrared Detection
 - UV – Ultraviolet Detection
 - MT – Magnetic threads detection
 - 3D – Banknote size detection
 - DEN – Optical density detection
- Advanced batch (levels from 0 to 9), summation, automatic / manual start functions
- Clear high contrast LCD display with illumination adjustment
- Easy access for regular maintenance and cleaning
- Can be updated or reprogrammed by PC

► SPECIFICATION OF PRO MIX EURO

Counting speed, Banknotes/min	600/900/1200/1500
Speed in IR detection mode, Banknotes/min	900/1200
Display type	LCD
Power Supply, V/Hz	100-250/50-60
Power consumption, W	40
Net weight, Kg	6
Dimensions, mm	230/250/260

Usability

Operation modes:

MIX – counts mixed banknotes, counts the total amount

VALUE – counts stacks of banknotes, previously sorted by denomination, and identifies banknotes of other denominations

COUNT – counts the quantity of banknotes without regard for denomination

The clear high contrast LCD display shows the detailed counting results (total amount, banknote quantity by each denomination, amount by denomination) automatically after completing a counting operation.

Guiding tracks assist in inserting banknotes into the device correctly
