

PRO 4 / PRO 7

Compact UV Detector

The PRO 4 and PRO 7 detectors are designed for simple and convenient verification of banknotes under ultraviolet (UV) light. Their compact size makes them the most common detectors in various types of ticket offices where space is needed.

UV Detection

Verification of banknotes in a set

► FUNCTIONS AND ADVANTAGES

- UV-detection for fluorescent security features
- Verification of banknotes from all around the world
- Enlarged working space for convenience
- Capable of verifying multiple banknotes at once
- Compact size for easy use on desktop

PRO 4 / PRO 7 is capable for banknotes verification from different countries of the world.

A counterfeit banknote, printed on plain paper, is easy to detect by its reflection of UV rays and is easily detected by the PRO 4 / PRO 7.

Several banknotes may be verified at once by creating a fan shape.

The detector's hood design prevents the dispersion of the UV rays in white light. Detectors of this series can be used in well-lit rooms.

PRO 4 / PRO 7 is the smallest stationary manual detector of its class. The main advantage of this detector is the possibility to use it in a very limited working place.

► **Specification of PRO 4 / PRO 7**

Model of detector	PRO 4	PRO 7
UV lamp power, W	4	7
Power supply, V/Hz		220/50
Power Consumption, W	4	8
Net weight, Kg	0,3	0,6
Dimensions, mm		195x190x80
