

## PRO 12

### Ultraviolet manual counterfeit detector

---

With a powerful source of ultraviolet light, the PRO 12 allows for a banknote's UV characteristics to be checked in any lighting condition. Simplicity, reliability and availability make the PRO 12 one of the most popular detectors offered.

#### ► FUNCTIONS AND ADVANTAGES

- Verification of banknote's image by ultraviolet light
- Verification of banknotes from around the world
- Verification of banknotes in a fan shape

Easy to use

The PRO 12 is capable of verifying the banknotes of different countries of the world.

A counterfeit banknote, printed on plain paper, is easy to detect by its reflection of UV rays and is easily detected by the PRO 12. Banknote can be verified on by one or in a fan shape.

Thanks to a powerful source of ultraviolet light, the PRO 12 allows to check UV characteristics of the banknote in any lighting condition.

Thanks to the modern design, the device perfectly fits to any office interior. The packaging protects the detector during transportation or storage.
