

## PRO CL 200 E

### Automatic Detector

---

The PRO CL 200 counterfeit banknote detector allows users to verify the authenticity of banknotes with a high degree of accuracy, without requiring the operator to have a special knowledge of the banknote's protective features.

*Icons:*

Infrared detection

Magnetic detection

Banknote size detection

Optical density detection

Summation of results

Audio alarm when suspicious banknotes are detected

Able to be powered by a car adaptor

Able to be powered by a network

Connects to a PC to update software

### ► FUNCTIONS AND ADVANTAGES

- **High accuracy verification of banknote's authenticity:**
  - Infrared detection
  - Magnetic detection
  - Banknote size detection
  - Optical density detection
- High speed verification – up to 90 banknotes per minute
- Two operation modes: summation and verification of single banknotes
- Forward or reverse filing modes for authenticated banknotes
- Audio and operating code indications
- 2 bright LED displays
- Powered from a network or car adapter
- Self-cleaning (surface cleaning)
- Ability to connect to a computer for software updates
- Easy to use, without requiring the operator to have special training
- Compact and light

**Verifiable currencies, depending on software updates:**

- EUR
- EUR/GBP
- EUR/PLN
- RUR
- RON
- TL

**Convenient to operate**

High counting speed during verification – 90 banknotes per minute

Audio alarm when a suspicious banknote is detected  
The display shows the error code

There are 2 filing modes for authenticated banknotes  
The forward filing mode is convenient to check a stack of banknotes  
The reverse filing mode is suitable for use when the detector is sitting against a wall  
The current mode is shown on the display

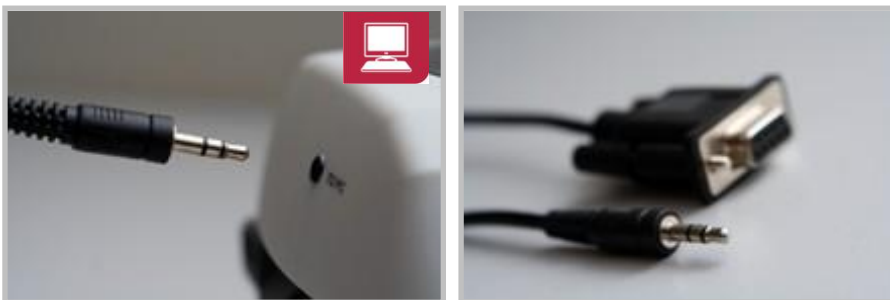

The PRO CL 200 automatic banknote detector works with a power cable or car adapter  
The car adaptor is included

Two operation modes:

1. Verifies single banknotes with the value displaying.
2. Summation on the display shows the total quantity and total amount of checked banknotes

The PRO CL 200 can be reprogrammed quickly.  
The adaptor is included.

You can put EURO banknotes on the detector PRO CL 200 with any orientation  
When modified for other currencies, the banknote must be put on the detector as shown on a special icon, placed on the body of the device

The high accuracy of verification of a banknote's authenticity is achieved through a specially designed system of infrared, magnetic and optical sensors

The detectors of the PRO CL 200 series are compact and do not occupy a lot of space on your working desk  
Thanks to the modern design, the device perfectly fits to any office interior

The packaging protects the detector during transportation or storage

Because of self-cleaning function, the PRO CL 200 does not require frequent cleaning of sensors

► **SPECIFICATION OF PRO CL 200 series**

Model of the detector	PRO CL 200 E
Currency type to be verified	EUR
Detecting speed, Banknotes/min	90
Filing banknote modes	direct and reverse
Information on the 2 LED-displays	Denomination of the detected authentic banknotes Total number of the authentic banknotes Total value of the authentic banknotes Error codes
Power voltage/ Power consumption, V/mA	12/800
Net weight, Kg	0,75
Dimensions, mm	220x80x120
